

DriveSavers Government Solutions

Fast, Reliable, Secure Data Recovery and eDiscovery

DriveSavers, the worldwide leader in data recovery services, provides the fastest, most reliable and only certified secure data recovery, eDiscovery and digital forensic services available in the industry today.

DriveSavers helped pioneer the data recovery industry in 1985. Our engineers continue to develop cutting edge solutions that allow us to successfully recover data from all types of storage devices, including hard drives, solid-state drives (SSDs), smartphones, tablets and camera cards, as well as RAID and NAS devices. We recover data from storage devices with diverse problems such as physical damage, mechanical failure and logical corruption, while maintaining consistently high success rates.

Unparalleled Customer Service

U.S.-based professional data recovery advisors are available 24 hours a day, 7 days a week. We offer the fastest standard turnaround time in the industry, at 24 to 48 hours. Round-the-clock Priority Service is also available.

Advanced Cleanroom Laboratory

DriveSavers certified ISO Class 5 Cleanroom is the most sophisticated in the industry. This dust free, temperature and humidity controlled environment maximizes recovery success by protecting hard disk drive platters and delicate electronic components from “killer particles” while they are open and vulnerable to damage.

RAID, NAS and SAN Experts

DriveSavers Enterprise Systems Group specializes in recovering data from high-capacity devices including RAID, NAS, SAN, tape and multi-disk servers. Handling simultaneous multi-drive failures and logical corruption issues, they routinely recover databases, mail servers, ERP accounting systems and other mission-critical data for government agencies.

Data Security During Data Recovery

DriveSavers undergoes an annual SOC 2 Type II audit conducted by third-party professionals. This audit verifies that our processes support government agencies that must maintain compliance with data privacy/data security regulations, policies and guidelines.

Data hosting control objectives and activities are in place, enforced and operating effectively to protect critical data from an unauthorized breach.

Certified Experts in Recovering Encrypted Files

Trained and certified by leading encryption software publishers, DriveSavers engineers are qualified to handle encryption keys properly and safely.

Using our proprietary software and hardware tools, a sector-by-sector image of the source drive is created during the recovery process—your original data is never compromised. This image can be transferred to a target drive and returned with original encryption still intact or restored and decrypted at DriveSavers to verify its integrity. Recovered data can be returned to the customer either encrypted or fully decrypted. Custom solutions are available for recovery of the encrypted files and drives.

High Security Service

DriveSavers offers a High Security Service that adheres to rigid U.S. Government security protocols.

Only engineers with government clearance will have access to your data. The recovery is conducted in secure, locked area using a standalone system and removable media under government Protection Level 1.

During non-working hours, the media is kept in a Department of Defense approved, high security safe.

All devices are tracked in compliance of chain of custody protocol throughout the entire data recovery process.

Lost Critical Data?

Data Recovery Solutions for Government

Who Will You Trust with Your Data?

*“If the data wasn’t recovered, we would have been illegal
in the eyes of our major command.”*

– Dean Johnson, Air Force Systems Administrator

Before choosing a data recovery, eDiscovery or digital forensics company, demand proof of their technology, security and experience. If they can’t prove it, you may lose it—forever!

DriveSavers Meets all Industry Standards

- All storage device manufacturers authorize DriveSavers to perform recovery on their devices without voiding the original warranty.
- Data recoveries are performed in a pristine Cleanroom environment that meets ISO standards to minimize contaminants and maximize recovery results.
- Critical and proprietary data is protected from external breach during the data recovery, eDiscovery or digital forensic process.
- Accounting, auditing and information security professionals have verified that our facility information technology controls and processes are operating effectively and provide maximum data security.
- Data recovery engineers are certified to properly and safely recover encrypted files and devices.

Demand Proof

- *Proof:* DriveSavers is authorized by all leading storage device manufacturers to perform data recovery without voiding the original warranty
- *Proof:* Annual Network Security Audit
- *Proof:* Annual ISO Cleanroom Standards Certification
- *Proof:* Annual SOC 2 Type II Audit
- *Proof:* HIPAA Security Compliance Report
- *Proof:* Certification from leading encryption software publishers
- *Proof:* Certification from leading forensic software publishers
- *Proof:* Dun & Bradstreet Proof of Credibility

Fast, Reliable, Certified Secure Services

- All storage devices
- All operating systems
- Standard turnaround time at 24-48 hours
- Round-the-clock Priority Service
- High Security Service
- eDiscovery and Digital Forensic Services
- GSA Schedule #GS-35F-0121S
- Certified ISO Class 5 Cleanroom
- Trained and certified by all leading encryption software vendors
- Dedicated Enterprise Systems department
- SOC 2 Type II Annual Audit
Verifies our qualifications to support customers who must comply with data privacy and data security regulations such as:
 - HIPAA
 - FERPA
 - SOX
 - GLBA
 - NIST SP 800-34 Rev. 1
